Hit and Bounce Net ~ Hit and Bounce Slow Net

FEBRUARY 2002

HBN MANAGER'S COMMENTS

The kennel was buzzing in January, thanks to the fifty-seven stations who checked in and got the new year started with 705 QNI, 554 pieces of traffic listed and 545 cleared. Average time per session- 34.7 minutes. Longest session was 65 minutes on January 25. Best attendance day January 28, with 29 QNI, KA8WNO, NCS. Best traffic day January 6, QTC 37/42, W2EAG, NCS. Only 4 days with less than 20 QNI.

January "Traffic Honor Roll" (10 or more listed): KA8WNO QTC 129; K8LJG 92; K2BCL 31; K8GA 43; NG1A 26; WA3UNX and K8KV 18 each; W2EAG and WD8DHC 15 each; N4ABM 14; W8RTN 11 and W2MTA 10.

Attendance was up in January- KA8WNO, K2BCL and WØGRW 31; WX4H 30 (I recounted that one. Hi.); W2MTA 29; NR9K 28; K8LJG 26; KK3F 25; WA3UNX, W2EAG, K21U, WØGRW and N9KHD 24. **QNI 10 to 22 days:** K8KV, KA5NNG, KA8VWE, W3JKX, AA8PI, K3NNI, N1DHT, N4ABM, N3DE, WD8DIN, K2GCE, WD8DHC, W8RTN, AA4AT, W4VLL, KB9IOT all of whom checked in from. **Weekenders-** WA4DOX 8 (OF 8); W1KX 7; N3QA 5 and WA3JXW 5.

We are honored to have these newcomers: AC4W Brian NY (Dec); KC9YZ Bob IL; WW8D Tom WV; and AF8X Bob FL.

ATTENTION ROOA Members: I have issued a second certificate to a couple of people, so if anyone has a certificate issued before 1983 and through 1988, and you aren't listed (*see page 6*) please let me know. My list dates from 1983 through 1999, with only one listed in 1983 (KW1U, who was then KA1GBS.) If there is an old list somewhere out there, please send it for updating and I shall return it. While we're updating, let's do

the birthday list also. (*page 6*) If you aren't listed, or if the date is incorrect, send that also. My new year's resolution is to get organized!! First one I've ever kept. Hi. Tossing some things... you know- *junk: something you keep for 20 years and throw away three days before you need it.*

ROYAL ORDER OF ARFERS: Welcome these new Traffic Hounds, "inducted" into the ROOA "Hall of Fame" -certified as of February 7:

How old is HBN? Edith, WA4SRD, tells me that HBN was founded in 1938. She was a major contributor of data for the History Sampler.

HBN numbers are going up! Average number of QNI in January was 22.7, and traffic listed 17.8. Let's hope for good band conditions to continue.

Harry, N3DE, vacationing in Florida, monitoring HBN on his QRP rig. He will be back with us around February 23.

A special "thank you" to all for your generous contributions; for news, profiles, etc.. Your presence is very much appreciated.

Keep on arfing!
73, Sis WD8DIN

HIT AND BOUNCE SLOW NET
MANAGER'S COMMENTS
C.M. (SAM) Shearer, WB5ZJN, Mgr.
Charles (Chuck) Punzell, N3ON, Asst. Mgr

Twenty-eight trustworthy hams QNI'ed this month. These great guys (no gender bias here – there were no gals checking in, and we love you ladies) generated a QNI of 371 and a QTC of 152. Perfect attendance goes to Gail, K2BCL; Sam, KG2HA; Carter, N3AO; Cid, W3QQ. Others with high marks were N3ON and NR9K (30), WB5ZJN (28), N9KHD (24), NG1A (19), W3JKX and K2YAI (16), and W2MTA (15). Everyone who checked in is important to the success of the net, and we greatly appreciate your participation.

About us: Don, K2YAI, is “back in the saddle again.” (How many Gene Autry fans are out there?) We are very glad to have you back with us, Don.

How about you? So, what is going on with you? Your activity on and off the air is always interesting to us. Drop me a line (Postal service: C. M. Shearer, 3136 Englewood Dr., Stow, OH 44224. E-mail: cshearer@kent.edu), and let us know what new and old exciting things are going on in your life.

N43502: I have had some questions about my Taylorcraft airplane, so I have a “baby picture” of it below. At this time, it is completely stripped down to the fuselage frame. When my schedule slows down a bit, I will start rebuilding it, literally, from the inside out. When finished, it will be the same beautiful, docile, ship she was in 1946 when she rolled off the assembly line in Alliance, Ohio. The

T-craft is beautifully flying machine. It flies like a “real” airplane – no fancy hydraulics, no electronics, just you and the machine in complete harmony and cooperation with mother nature and the laws of physics. For me, this is flying!

Later...Sam, WB5ZJN

[*This is a beauty. Bright blue trim on white. –Ed*]

PSYCHO-BABBLE FOR THE CW OPERATOR

Here are some quirks relative to the use of CW that I've observed in myself. It would be interesting to know if other Arfers experience these too,(or other CW quirks). If so, how about sending the info to Sis so as to share it via the TC?

Problems getting into "receive":

I notice that after sending a string of several messages, and the time comes to put myself into "receive" for fills or to receive some incoming messages, that I often need a few words of incoming code to get my brain in gear. It seems to take a kind of conscious effort of will to re-focus on the incoming code, and often I have to ask for a repeat of the first word or two sent. Possibly the reason is that the sending process has become too automatized that my brain goes to sleep while sending. (Yeah, I know ...it's asleep all the time. Hi.)

Automatization of sending:

I notice that when sending traffic, the actual act of sending has become so automatic that I often can't recall what I've been sending. Sometimes, I've had to ask the receiving station if I sent some part of the message (such as the phone number) because I suddenly realize I have absolutely no recall

of having sent it, and need reassurance that it actually was sent. So far, I've never received a negative response. In the dark ages, when I worked as a Linotype operator, the same sort of thing happened more often, and you could type up a whole column and not have any idea of the content.

Receive errors:

I notice that the difficulty in "getting" a missed word seems to increase exponentially.....even some simple words, once missed, as often as not, need two or more tries to get.

Difficulty copying slow CW:

I find that at least I'm not alone on this one. A German psychologist by the name of Koch did some extensive testing of commercial operators way back in the 1930's, and found that at the very slow speeds, they had much difficulty copying. The following material was extracted from "The Art & Skill of Radio-Telegraphy", by Bill Pierpont, NØHFF, (Chapter 29 from "The Mill" software package) and heavily edited by me:

CHAPTER 29 - THE KOCH RESEARCHES

The obviously extensive researches of Ludwig Koch, psychologist at Die technische Hochschule, Braunschweig, Germany, reported in Jan-Feb.1936, seem to be virtually unknown outside of Germany. His goal was to discover the most efficient way to teach the Morse code to prospective radiotelegraph operators to meet the International requirements for commercial radio operators.

Koch's researches involved: determining what competent operators are doing, examining teaching methods in current use, then devising better methods, and testing them in actual classes. His conclusions and recommendations seem to be the earliest real research into how best to teach the Morse code. They agree on the whole with the best methods of today, and may offer some further ideas of value to us.

TESTS TO DETERMINE WHAT COMPETENT OPERATORS ARE DOING

He ran three series of tests to determine how the code is comprehended and for this purpose used four competent, actively-practicing radio telegraphers.

RECEIVING TESTS

Test number One: - Each operator was to copy the 30 German Morse characters sent by a machine in perfect "standard" timing at each of four different speeds... [in the range of 4 to 16 WPM]. At about 5 wpm these experienced operators hardly recognized a single character correctly! At 7 wpm only 40% to 60% of the letters were correctly identified. At 10 wpm all operators were getting about 95% correct. By 12 wpm all of them correctly identified every character.

Test number Two: - Here the length of the spaces between the letters was doubled. This time the operators recognized almost all letters correctly at all speeds. That is interesting.

From these tests it was concluded that experienced operators recognize a code character by its overall acoustic pattern (Gestalt), and that this pattern stands out clearly only

when sent at a minimum character speed of about 50 characters per minute. At lower speeds it is heard simply as a disjointed series of signals. -- Koch concluded that these operators could recognize the too-slowly sent letters only when letter spacing was doubled, because this increased interval gave them time to integrate the sound and mentally speed it up to where they could recognize it. (A beginner would not have the skill to do this.)

Various tests showed that about 12 wpm was an optimal speed for most people to begin learning. It is far enough above the 10 wpm plateau to avoid it. Further tests showed that once the student had mastered all the code characters at 12 wpm, it was relatively easy for him to advance to 70 letters per minute, and by continuing to practice using the same principles, to advance fairly rapidly, step by step, to the required speeds. Thus a 12 wpm beginning speed seemed well justified.

From the Ben White Memorial Net Historical Sampler

Published 1998

At least three unique "Q" signals were created for use on HBN....

QWW- "I want words with____" (1965)

In 1974, as defined by W8IBX (NOW W8IQ):

QPC- "Put out several Calls and report back to me"

QPC?- "Shall I Put out several Calls and report back to you?"

QDS; "Direct Stations (callsign) and (callsign) to move (up/down) and pass traffic".

QDS? - "Shall I Direct Stations (callsign) and (callsign) to move (up/down) and pass traffic?"

RANDOM THOUGHTS ON NET PROCEDURES

NCS-ing: I think it is a good idea for the NCS to show up on the net frequency a little before the actual starting time for the net, and try to exchange a few words with some of the other Arfers who are probably lurking on frequency. That gives the NCS some indication of the state of propagation conditions before actually starting to call up the net so he can better anticipate potential problems getting everyone checked in with the minimum of fuss and bother.

Listen to what the stations checking in are saying in addition to their traffic lists. If a station adds "QNP", then there is not much point in the NCS acknowledging him. Rather the NCS should pick another station who is likely to QNJ the station and ask that station to QSL the list and the QNI.

Probably, it's another good idea, especially if the band is not in good condx to ask stations geographically distant from you to QPC periodically. That often eliminates the problems of stations who would otherwise require a QNB to get checked in.

One of the benefits of operating on a net like the HBN is that because of the wide geographical spacing between the various stations and because it is the same stations who QNI daily, you can gain some insight into the propagation paths involved. That insight can be a real help for the NCS when band conditions are less than ideal and he needs as many options as he can think of to find a path for the traffic.

When band condx are poor, the NCS should not hesitate to send stations to alternate bands that seem likely to provide a path. Also, in exceptionally poor condx, the possibility of an unusual long-skip QNB should not be overlooked. For example, it might happen that two EAN guys can't connect on 40 meters, but are geographically too close to each other for 20 meters; in that situation, it might be viable to send the two EAN guys to 20 meters along with one of the CAN guys to act as a QNB station.

When there is enough traffic listed for a particular state, and more than one outlet, it is better to spread the traffic amongst the various outlets rather than give it all to one station. Otherwise the

outlet stations being ignored may decide that they are not needed or wanted and quit checking in, and we need all the participants we can get these days.

General: I think that the long-standing NTS guideline of discouraging stations from offering to assist the NCS by relaying needs to be relaxed on a wide-area net such as ours. BUT, any station wanting to help the NCS should try to do so in such a way as to not add to the problem. My own method is to first attract the NCS's attention by sending my suffix, and then, after being recognized, make the relay. Often, a station who is attempting to QNI without success will hear the helper's suffix and will wait for the relay to get his traffic listed. Here is a subject that by rights should not even have to be mentioned amongst experienced traffic handlers:

When sent off the net frequency to move traffic, the first thing that should be done is to find out if the new frequency is clear. I still hear some of the most experienced traffic guys just plop down on top of an "in progress" QSO and start calling for their station. (Which may validate what one my employers once told me: that some folks have ten years of experience, but others have one year of experience ten times over.)

How can we expect the non-traffic folks to be considerate of us and our nets if we don't set a proper example by being considerate of them? We all know (or should) that when the NCS says "U5" that he means go up 5 and find a clear spot as near to the designated spot as possible.

As always, criticisms, comments and/or suggestions are welcome.

73, KA5NNG

QNW Pennsylvania traffic:

WPA zip codes 150xx through 160xx:
(WA3UNX, WB8KPE, WA3QNT, N3COR, NR9K)

EPA all others plus some 160xx:
(W3JKX, WA3JXW, K2BCL, N3AO, N3SW)

Other QSP (if no other available):
